

## PABXSoft Multi Site

Multi Site is one of the additional functions within PABXSoft Premium licenses

Multi Site provides the ability to report on remote PABXSoft databases at other locations.

Each remote location needs an installation of PABXSoft (one license per location must be purchased, but only head office needs to buy Premium).

The PC running PABXSoft Premium must have full access to the PABXSoft database at each site. (See Networking FAQ on the PABXSoft web site).

The first step is to establish a name for each site and the path to the database.(image above)

Then it is simply a matter of selecting the site you want to run reports on. (image below)
